DESCRIPTION
Cardiovascular magnetic resonance (CMR) is established in clinical practice for the diagnosis and management of disorders of the cardiovascular system.

CMR has several advantages over other imaging modalities:
- Non-invasive
- No ionizing radiation
- No known clinical side effects
• Soft tissue imaging is superior
• No imaging artifact from bone
• Equal clarity in any view: axial, sagittal, coronal, or oblique
• Ability to acquire two, three, and four-dimensional data

Disadvantages of CMR include:
• Requires more patient cooperation
• Longer imaging times
• Incompatibility with various medical and life support devices
• Attraction of ferromagnetic objects
• Cost (When applied appropriately with state of the art MRI technology and expertise, initial test cost may be offset by a reduction in downstream utilization of other redundant imaging tests. CMR has the potential to provide a comprehensive examination in one setting at considerably less risk and cost to the patient.)

POLICY
A. **Medically necessary** indications for CMR include:
   1. Congenital heart disease
      a. Assessment of shunt size
      b. Situs anomalies with complex congenital heart disease
      c. Anomalous pulmonary venous return, especially in complex anomalies and cor triatriatum
      d. Anomalous systemic venous return
      e. Systemic or pulmonary venous obstruction
      f. Ventricular Septal Defect (VSD) associated with complex anomalies
      g. Supracristal VSD
      h. Evaluation of right and left ventricular volumes, mass and function
      i. Pulmonary regurgitation
      j. Supravalvular aortic stenosis
      k. Post-operative follow-up of shunts
      l. Aortic (sinus Valsalva) aneurysm
      m. Aortic coarctation
      n. Vascular rings
      o. Aortopulmonary window
      p. Anomalous origin of coronary arteries
      q. Pulmonary atresia
      r. Central pulmonary stenosis
      s. Systemic to pulmonary collaterals

   2. Acquired diseases of the vessels
      a. Diagnosis and follow-up of thoracic and abdominal aortic aneurysm including Marfan syndrome
      b. Diagnosis and follow-up of chronic aortic dissection
c. Diagnosis of aortic intramural hemorrhage
d. Diagnosis of penetrating ulcers of the aorta
e. Pulmonary artery anatomy and flow
f. Assessment of thoracic, abdominal and pelvic veins
g. Assessment of renal arteries
h. Assessment of iliac, femoral and lower leg arteries
i. Assessment of thoracic great vessel origins
j. Assessment of cervical carotid arteries
k. Assessment of pulmonary veins including one in association with an electrophysiology ablation for atrial fibrillation

3. Coronary artery disease
   a. Assessment of global ventricular (left and right) function and mass
   b. Coronary anomalies
c. Acute and chronic myocardial infarction - detection and assessment; myocardial viability

4. Pericardial disease, cardiac tumors, cardiomyopathies and cardiac transplants
   a. Detection and characterization of cardiac and pericardiac tumors
   b. Hypertrophic cardiomyopathy
c. Dilated cardiomyopathy - differentiation from dysfunction related to coronary artery disease
d. Arrhythmogenic right ventricular cardiomyopathy (dysplasia)
e. Siderotic cardiomyopathy (in particular thalassemia)
f. Restrictive cardiomyopathy

5. Valvular heart disease
   a. Cardiac chamber anatomy and function
   b. Quantification of regurgitation or stenosis

B. **Experimental / investigational** indications:
   1. CMR as a screening test
   2. Coronary MRA for screening of coronary artery disease

C. Subject to review for medical necessity:
   1. CMR for indications that are not listed above
   2. Duplication of services such as CT scan, radionuclide studies, ultrasound, and MRI
**CODING**

The following codes for treatment and procedures applicable to this policy are included below for informational purposes. Inclusion or exclusion of a procedure, diagnosis or device code(s) does not constitute or imply member coverage or provider reimbursement. Please refer to the member’s contract benefits in effect at the time of service to determine coverage or non-coverage of these services as it applies to an individual member.

</table>
| 11-01-2007    | • Policy section was revised to combine information from item F. to B11. Item F. was deleted and stated, "Pulmonary venous assessment in association with atrial fibrillation dysfunctions prior to electro physiology ablation." Item B11 was modified from, "Assessment of pulmonary veins" to its current verbiage.  
  • The following paragraph was deleted to remove the definition of class I classification of cardiovascular conditions: "CMR is medically necessary for indications that include an expert Consensus panel's class I classification of cardiovascular conditions. A class I classification is defined as: provides clinically relevant information and is usually appropriate; may be used as first line imaging technique; usually supported by substantial literature."  
  • Under "Experimental/investigational indications:" added to number 2, "for diagnosis and screening".  
  • Under "Subject to review for medical necessity:" added to number 1, "...indications that are not listed above," and deleted, "...all indications. Medical records should clearly document medical necessity."  
  • A Diagnosis section was added to the policy to reflect all the appropriate diagnoses eligible for this procedure. Previously no diagnoses codes were reflected in the policy.  
  • Revision section was added.  
  • References were updated. |
